

WIRE MESH BELT CONVEYORS

mit-mol Wire mesh belts come in wide range of types, from wide-gap honeycomb belts to tightly-knit chain belts. Both allow air (or liquids) to circulate around the products being conveyed, and hence can be used to 'drain' products, or to warm/cool them in transit. Wire Mesh conveyors are lighter-duty than their chain-mesh counterparts, and make a very cost-effective solution where the products being conveyed are relatively light.

Featured With

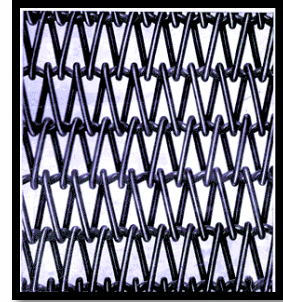

- MS Galvanized
- Honey Comb Belt
- Stainless Steel Wire

Attributes

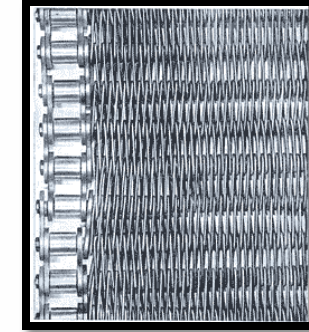

- Durable
- Light & Medium duty
- Low maintenance
- Easy Material Handling
- Easy to use

Applications

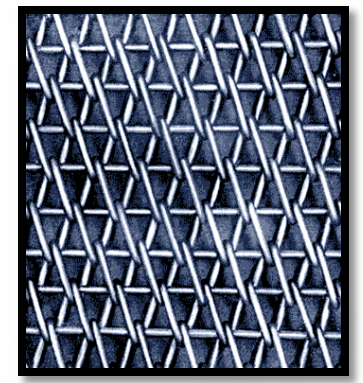

- Annealing
- Healing
- Baking
- Drying
- Dehydrating
- Cooling
- Washing
